Demand grew 18.9%; newer stations drove most incremental ride-minutes

Indego | January–September 2026 vs. January–September 2025 | Duration is a revenue proxy, not actual revenue

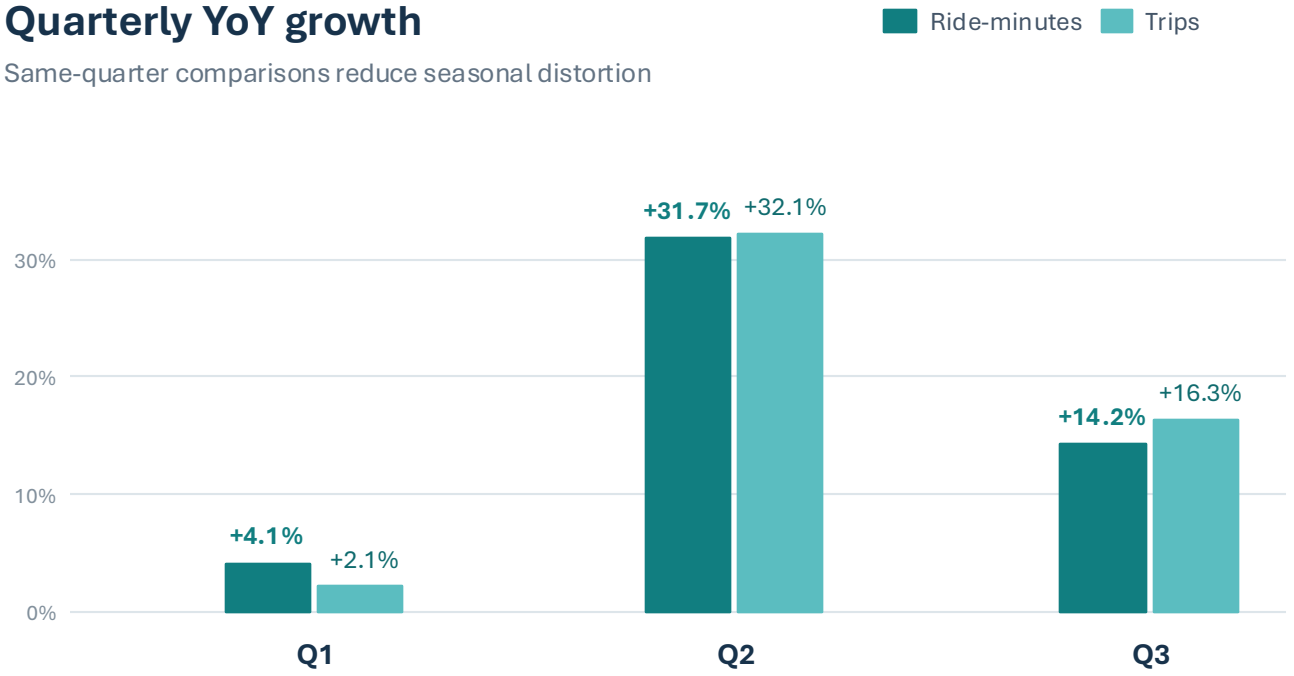

+18.9%
TOTAL RIDE-MINUTES
17.68M → 21.02M minutes

+19.2%
TRIP VOLUME
1.03M → 1.23M trips

17.08 min
AVERAGE TRIP DURATION
17.12 min in 2025 | nearly flat

Quarterly YoY growth

Same-quarter comparisons reduce seasonal distortion

Q2 spiked; Q3 still grew but at a slower YoY pace.

Where growth came from

Share of +3.34M incremental ride-minutes

Opened in 2025–26 — **+1.99M minutes**

Opened before 2025 — **+1.36M minutes**

Demand is shifting toward e-bikes

+34.9%
e-bike trips

–9.1%
standard bike trips

Station attribution includes a –0.2% virtual-station offset.

Source: Indego public trip CSVs (2025 Q1–Q3; 2026 Q1–Q3) and station metadata (Oct. 15, 2026). Ride-minutes = valid duration (1–1,440 min).

Pilot e-bike capacity at proven-demand stations before a broad rollout

Recommendation: pursue utilization-led growth, with clearly defined expansion gates

Evidence to prioritize the pilot

+33.9%
e-bike ride-minutes

+8.0%
mature-network minutes

Established stations worth screening

Jan–Sep 2026 YoY | attributed to start station

START STATION	Δ RIDE-MIN	YOY
Schuylkill Banks Pergola	**+62.4k**	+27.4%
23rd & Fairmount	**+57.9k**	+50.8%
9th & Arch	**+45.6k**	+63.1%

Candidate screens only—not site-level e-bike demand or ROI.

A staged investment decision

01

SCREEN | prioritize existing sites

Check growth persistence, local e-bike trip mix, bike availability and operational constraints.

02

PILOT | 3–5 sites for 8–12 weeks

Rebalance or add limited e-bike capacity; compare against similar unmodified stations.

03

SCALE | only if economics clear

Track incremental ride-minutes per bike-day and contribution margin net of service and capital costs.

Can we say growth is “too fast” or “too slow”? Not yet—pricing, fleet capacity and unit costs are missing. Approve a reversible pilot, not full capex.

Source: Indego public 2025–26 trip CSVs + station metadata. All pilots, timeframes and decision gates are proposals, not observed results.
